

Algorithm and dataset

Algorithm includes:

- Step-by-step procedure
- Logic or method used
- Model or technique applied
- Process flow of the system

Submission Title

WhatsApp Automation Bot using Python and Selenium

Link

<https://github.com/yourusername/whatsapp-automation-bot>

Step-by-Step Procedure

1. Install Python and Selenium.
2. Configure ChromeDriver.
3. Read contacts and messages from an Excel file.
4. Open WhatsApp Web and scan the QR code.
5. Search the contact.
6. Open the chat.
7. Type and send the message.
8. Repeat for all contacts.
9. Display the sending status.
10. Close the browser.

Logic or Method Used

Uses Selenium WebDriver to automate WhatsApp Web. Contact details and messages are read from an Excel dataset using Pandas/OpenPyXL.

Model or Technique Applied

Python Automation, Selenium WebDriver, Excel Dataset Handling.

Process Flow of the System

Start → Read Excel → Open WhatsApp Web → Scan QR → Search Contact → Send Message → Update Status → Repeat → End

Dataset

Excel file containing Contact Name, Phone Number, and Message columns.
